CORONAVIRUS: WHAT WE KNOW

ABOUT THE VIRUS
Coronavirus disease 2019 (CoVID-19)
The virus causes a mild to severe respiratory illness. How the virus spreads isn’t yet fully known. It’s likely spread through:
- Droplets of fluid that a person coughs or sneezes into the air
- Touching a surface with virus on it and then touching your mouth, nose, or eyes

SYMPTOMS
- Incubation time period
  - None to mild
  - Fever
  - Cough
  - Trouble breathing
  - Severe respiratory illness and in some cases, death

PREVENTION
- Wash your hands or use an alcohol-based hand sanitizer often.
- Avoid touching your eyes, nose, and mouth.
- DON'T have contact with people who are sick.
- Clean surfaces often with disinfectant.

WHO IS AT RISK?
If you’ve been to a place where people have been sick with this novel coronavirus, you are at risk for infection.

You’ve been in close contact with a person known to have novel coronavirus and you have a fever, cough, or difficulty breathing

You have these symptoms and you live in or have recently traveled from an area with ongoing spread of novel coronavirus
