Turf Toe

**Definition**
Turf toe is the strain or tearing of the ligaments located underneath the toe.

**Causes**
Turf toe is caused by a severe upward bending of the big toe. This injury commonly occurs on artificial surfaces, which is how it got the name turf toe. Turf toe is prevalent in football, soccer and basketball.

**Symptoms**
- Pain
- Swelling
- Tenderness at the joint of big toe
Pain will increase as the big toe is pulled or stretched upward.

**First Aid**
Turf toe should be treated with:
- Ice
- Compression bandages and a protective brace
- Pain relievers such as non-steroidal anti-inflammatory drugs (such as ibuprofen)
- Rest and take weight off the toe.

Do NOT play again until you have been evaluated and treated. Some people may need crutches to walk, to take weight off of the big toe, until the swelling and pain have improved. Others with less severe pain may choose to brace or wrap the big toe for additional support.

**Seek a Medical Professional to:**
- X-ray toe to check for fractures
- Tape/brace toe to prevent unwanted movement
- Advise treatment and rehabilitation
